

Chemicals and Our Health

Consumer Choices and Policy Decisions

A Free Workshop

Tuesday, Nov. 15
7 - 8 p.m.

CMMC, 12 High St. Lewiston
Conference Room B

Cancer, learning disabilities, and reproductive problems are affecting too many families. Scientific data is increasingly showing that many common health problems are caused or aggravated by dangerous chemicals contained in the products that we use every day. And yet, most commonly used chemicals have NEVER been tested for safety before they are sold.

The Patrick Dempsey Center for Cancer Hope & Healing is pleased to announce a joint presentation with the Environmental Health Strategy Center on toxic chemicals and their impact on human health.

What are some choices we can make as consumers to avoid toxic chemical exposure? When is toxic chemical exposure out of our control, and what policies do we need to enact in order to protect our health?

Each of our panelists, including a parent, health professional, and policy advocate, will offer insights on this challenging public health issue. Whether you are hoping to gather some new tips for keeping your family healthy, or would like to learn more about environmental health policies, we hope you can join us!

Panel Presenters:

Steve Taylor

Program Director, Environmental Health Strategy Center

Bettie Kettell

RN, Pollution Prevention Coordinator, Mid Coast Hospital in Brunswick

Melissa Fiori

Environmentally conscious mother from Bowdoinham
